

## ACCELERATE TRAINING

**ACCELERATE training provides critical infrastructure companies with a self-guided approach to conducting their own CCE effort. It includes 16 hours of training on the CCE methodology, plus a detailed guide and templates participants can use to facilitate a CCE evaluation within their organization.**

### WHAT IS CCE?

**CCE is a methodology developed by Idaho National Laboratory (INL) that aims to reduce the impact of an advanced, targeted cyber sabotage campaign on an organization's most critical operations.**

**Assuming an aggressor mindset, CCE examines how an adversary might target the most critical operations, focusing on entire systems and processes, not individual technologies.**

**Even strong cyber hygiene may not withstand a targeted attack campaign intent on catastrophic damage. Rather than focusing on perimeter defenses that reduce attacker access, CCE results in engineering changes and process improvements that limit the damage an attacker can do once inside.**

**CCE is a structured process to determine high-consequence events—catastrophic disruptions to critical functions;**

**Map** how an adversary could achieve them using cyber means

**Identify** engineering solutions or tripwires that would eliminate or significantly block those events

**This focuses limited resources on high-impact investments.**

### WHAT DOES ACCELERATE TRAINING OFFER?

**This 16-hour in-person\* training offers participants the following:**

- **A fundamental overview of CCE concepts**, shifting how participants approach risk decisions
- **A structured set of process steps to implement the methodology**, including checklists and templates to facilitate a self-guided CCE evaluation, plus a detailed manual
- **A combination of trainer instruction and group exercises** that use realistic case studies to practice implementing each phase of the CCE process

**In-person format:  
2 days / 8 hrs. per day**

*\* please contact us to explore virtual training options*

### WHO SHOULD ATTEND?

**A self-guided CCE evaluation requires a diverse mix of expertise that crosses business and functional units. The following key personnel are encouraged to attend:**

- Asset and system operators • Control systems engineers
- Process experts • Functional and operational managers
- Cybersecurity analysts (both IT and OT) • Risk management analysts
- Emergency management system (EMS) support

*Companies that train multiple staff will be better equipped to conduct a coordinated CCE evaluation.*

### PREREQUISITES:

**Training is focused on preventing the sabotage of critical infrastructure functions. Participants should have applied experience in or responsibility for the following areas:**

- Engineering • Operations • Industrial control systems • Cybersecurity
