NEWSLETTER

November 2026 Edition

WELCOME

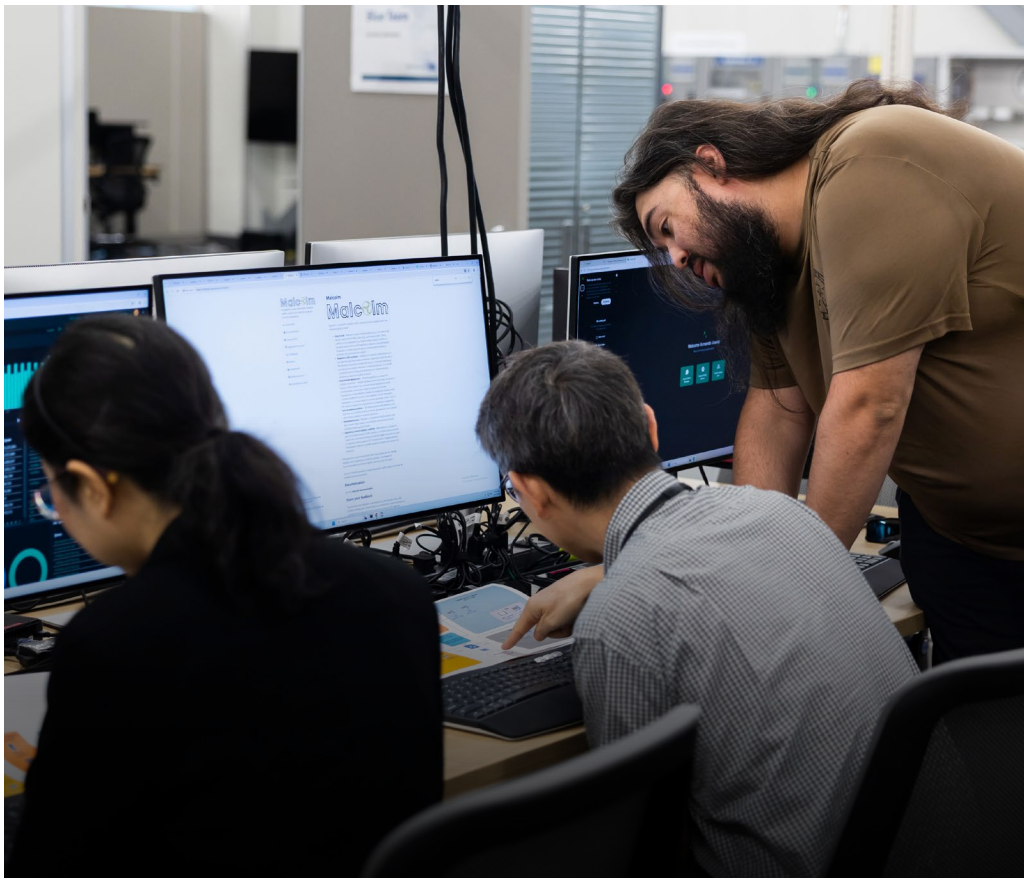

Hi everyone!

Welcome to this month's edition of the National Security Workforce Development Programs newsletter — your go-to source for updates on our information, engagements, upcoming events and internship opportunities. Whether you're a student exploring career paths, a team member tracking our outreach or a university partner collaborating with us, we're glad you're here!

RECENT ENGAGEMENTS

University of New Mexico

National Security Workforce Development Programs visited the University of New Mexico to strengthen partnerships and develop talent pipelines in support of national security missions. Discussions focused on shared research priorities in advanced energy, cybersecurity and monitoring technologies, as well as expanding workforce development through internships, joint research and customized STEM education pathways. The visit included productive engagement with faculty, students and administrators, along with tours of cutting-edge research facilities. This collaboration reflects INL's commitment to fostering American ingenuity and advancing innovation in alignment with National Nuclear Security Administration objectives.

CONCISE university participants engage with researchers and technical experts during a hands-on demonstration, gaining exposure to national security technologies.

Defense Logistics Agency

The team attended the Defense Logistics Agency (DLA) Industry Collider Day, which presented the opportunity to engage with leaders across the defense logistics community. The team attended an informational panel led by Addaryl Roberts, chief information officer at DLA, which highlighted key priorities and challenges in the defense logistics and technology landscape. April Augustine, INL's director of National Security Workforce Development Programs, spoke on a panel and discussed the importance of bridging the gap between STEM, academia and the national laboratory system. LTG Mark Simerly, director of DLA, engaged in the Q&A session, offering valuable perspectives. The event provided meaningful insight into how INL's workforce and talent strategies align with broader national security objectives.

INTERNSHIP OPPORTUNITIES

As we move forward with this year's internship program, our goal is to have all offer letters sent by the end of the year.

We will no longer be using pipeline postings. Instead, each specific intern opening will be posted individually ***here***.

If you don't see a posting that matches your skill set feel free to fill out our ***Internship Expression Form***. This form is used to express interest and collect information it does not serve as an official application.

STAY CONNECTED
